Acknowledgements

The Chief Nursing Officer, Department of Health, Social Services and Public Safety (DHSSPS) and the Director of Nursing and Allied Health Professions, Public Health Agency (PHA) would like to thank all of those who were involved in the development of the Advanced Nursing Practice Framework.

Particular thanks to the Executive Director of Nursing and User Experience, Belfast Health and Social Care (HSC) Trust, who chaired the Steering Group and the Northern Ireland Practice and Education Council for Nursing and Midwifery (NIPEC), who managed the project. Thanks also for the commitment and contribution of the Steering Group members, who were representative of senior nurses in HSC Trusts, PHA, Regulation and Improvement Authority (RQIA), education providers, DHSSPS, Royal College of Nursing (RCN). Also represented on the Group were the Directors of Human Resource (HR) Forum, NIPEC Council and Northern Ireland Medical and Dental Training Agency (NIMDTA) (See Appendix 1).

In addition, it is important to acknowledge the role played by the HSC Trust Executive Directors of Nursing, who helped shape the Framework, and medical colleagues, who provided guidance in relation to the clinical aspects of this important nursing role. Finally, thanks to all those who contributed during and following the two workshops in April and June 2014, which helped further refine the Framework.
1.0 Purpose of the Advanced Nursing Practice Framework

Northern Ireland’s Advanced Nursing Practice Framework was developed to provide clarity about the Advanced Nurse Practitioner role. The Framework

- provides a definition of Advanced Nursing Practice
- highlights the associated professional support and supervision required by Advanced Nurse Practitioners
- identifies the core competencies and learning outcomes essential for the Advanced Nursing Practice role
- acts as a guide for Commissioners, workforce planners, Executive Directors of Nursing, education providers, employers and managers of nurses, including nurses themselves.

The Advanced Nurse Practitioner role is a clinically focused one. As it is continually evolving, the elements contained within this Framework will require periodic review.

2.0 What is Advanced Nursing Practice?

An Advanced Nurse Practitioner practises autonomously within his/her expanded scope of clinical practice, guided by The Code. Professional standards of practice and behaviour for nurses and midwives (Nursing and Midwifery Council (NMC) 2015). The Advanced Nurse Practitioner demonstrates highly developed assessment, diagnostic, analytical and clinical judgement skills and the components of this level of practice are outlined in Table 1. See Appendix 2 for the characteristics which distinguish between Advanced and Specialist Nursing practice.
Table 1. Components of Advanced Nursing Practice

| Clinical Practice & Scope of Role | • work autonomously, using a person-centred approach within the expanded scope of practice  
• undertake comprehensive health assessment with differential diagnosis and will diagnose  
• prescribe care and treatment, or appropriately refer and/or discharge patients/clients  
• provide complex care, using expert decision-making skills  
• act as an educator, leader, innovator and contributor to research. |
| Supervision Requirement | • supervision relevant to the area of practice ¹  
• professional nursing supervision. |
| Service Improvement | • work with DHSSPS and other relevant organisations to influence policy development and services  
• lead on service improvement initiatives. |
| Education Requirement | • have completed a Master’s programme in the relevant area of practice  
• NMC recordable Non-Medical Prescribing V300. |

3.0 Core Competencies for Advanced Nursing Practice

In Northern Ireland, the Advanced Nursing Practice role is supported by a set of four core competencies and related learning outcomes, which have been developed from the work already completed nationally and internationally in Republic of Ireland (2005), Scotland (2007), Hamric et al (2009), Wales (2010), England (2010), Australia (2011) and RCN (2012, revised).

Direct Clinical Practice is the first core competency of Advanced Nursing Practice and is supported by three additional competencies (see Figure 1):

- Leadership and Collaborative Practice
- Education and Learning
- Research and Evidence-Based Practice

¹ The Advanced Nurse Practitioner should receive supervision from an expert within the relevant area of practice. In some instances, this may be a practitioner from a discipline other than nursing for example, a GMC registered Consultant/Specialty Doctor grade or equivalent.
4.0 The Advanced Nurse Practitioner Role

The Advanced Nurse Practitioner will undertake comprehensive health assessments, and will manage a range of illnesses and conditions that frequently present in the care settings within which the individual works. S/he will:

- practise autonomously within an expanded scope of practice
- demonstrate a person-centred approach to care delivery
- develop and sustain partnerships and networks to influence and improve healthcare outcomes and healthcare delivery
- educate, supervise or mentor nursing colleagues and others in the healthcare team
- contribute to and undertake activities, including research, that monitor and improve the quality of healthcare and the effectiveness of practice.

It must be noted that only those who meet the requirements of the role and who are employed as Advanced Nurse Practitioners, will be able to use the title.
5.0 Academic Preparation for Advanced Nurse Practitioners

The Advanced Nurse Practitioner role requires the nurse to have acquired a Master’s educational and training programme in the relevant area of practice. The entry requirements for such academic programmes are highlighted in Figure 1 and include the following:

- be on the live register of the Nursing and Midwifery Council
- have a graduate level qualification
- be employed in the relevant area of clinical practice.

6.0 Application of Core Competencies

The four core competencies relevant to the Advanced Nurse Practitioner’s role have specific core learning outcomes and are presented on pages 8 – 9. The learning outcomes have been developed to guide:

- curriculum development of the MSc Educational and Training programmes (commissioned by the DHSSPS)
- development of job descriptions for Advanced Nurse Practitioners
- ongoing learning and development of the individual employed in the role.

The core competencies and core learning outcomes will complement other generic competency frameworks which are relevant to the Advanced Nurse Practitioner’s role, such as Knowledge and Skills Framework (DH, 2004); Healthcare Leadership Model (NHS Leadership Academy 2013); Attributes Framework (DHSSPS 2014).

7.0 MSc Advanced Nursing Practice Programmes

The MSc Advanced Nursing Practice Programmes are designed to prepare nurses to assess, diagnose and manage the plethora of conditions that present in their specific area of clinical practice. The modules within each MSc Programme focus on developing nurses’ advanced skills in evidence-based practice, case management of patients with complex health needs and issues in advanced practice; they will also include the development and implementation of new roles.
The MSc Advanced Nursing Practice programmes have a significant emphasis on clinical acumen in the area of practice, and require over 500 hours of supervised practice in a variety of relevant settings. In addition, the programmes integrate research and evidence-based practice in each module, with the Extended Independent and Supplementary Prescriber (NMC V300 award) being an essential component of each programme.

It is important to note that the specific content of the direct clinical practice competency differs significantly by speciality and this will be reflected in each MSc Advanced Nursing Practice programme.

8.0 Core Competencies and Core Learning Outcomes

Core Competency 1. Direct Clinical Practice

The Advanced Nurse Practitioner will:

1. Practise autonomously, using a person-centred approach, within the expanded scope of practice.

2. Demonstrate comprehensive skills for assessment, diagnosis, treatment, management and prescribing within the field of practice.

3. Use clinical judgement in managing complex and unpredictable care events, drawing upon an appropriate range of inter-agency and professional resources in his/her practice.

4. Demonstrate ability to manage and negotiate person-centred health related/care needs for patients and their families.

5. Monitor and report quality issue affecting the provision of advanced nursing care delivery.
Core Competency 2. Leadership and Collaborative Practice

The Advanced Nurse Practitioner will:

1. Develop and sustain partnerships and networks to influence and improve healthcare outcomes and healthcare delivery.
2. Engage stakeholders and use high-level negotiating and influencing skills to develop and improve practice, processes and systems.
3. Provide professional and clinical advice to colleagues regarding therapeutic interventions, practice and service improvement.
4. Demonstrate resilience as a clinical and professional leader.
5. Develop robust governance systems by interpreting and synthesising information from a variety of sources in order to contribute to the development and implementation of evidence-based protocols, documentation processes, standards, policies and clinical guidelines and promote their use in practice.

Core Competency 3. Education and Learning

The Advanced Nurse Practitioner will:

1. Continue to keep knowledge and skills up to date by engaging in a range of relevant learning and development activities.
2. Educate, supervise or mentor nursing colleagues and others in the healthcare team.
3. Advocate and contribute to the development of an organisational culture that supports continuous learning and development, evidence-based practice and succession planning.
4. Lead person-centred care using a practice development approach.
5. Lead and contribute to a range of audit and evaluation strategies which inform education and learning.

Core Competency 4. Research and Evidence-Based Practice

The Advanced Nurse Practitioner will:

1. Contribute to and undertake activities, including research, that monitor and improve the quality of healthcare and the effectiveness of practice.
2. Critically appraise the outcomes of relevant research and evaluations and apply the information to improve practice.
3. Advocate and contribute to the development of a research culture that supports evidence-based practice.
4. Lead and contribute to publications and dissemination of work.
5. Demonstrate an understanding and application of a range of research methodologies.
